Maywoflamm® ECE lightweight

ABS

Engineered for lightweight construction.

Maywoflamm® ABS ECE lightweight is a closed-cell foamed ABS material for applications where low weight and high mechanical stability are essential. With a density of 0.92 g/cm^3, it is more than 20% lighter than comparable compact ABS sheets, enabling material savings and easier handling. The material combines low weight with high rigidity, toughness, and strength, making it ideal for weight-optimized components in tansportation and bus construction. It also meets the fire protection of ECE 118, Annexes 6, 7 and 8.

Operating in the following industries

Technique d'emboutissage

Construction de véhicules

Extended characteristics

Lightweight design

More than 20% lighter than comparable compact ABS sheets, enabling weight reduction and material savings.

Fire protection according to ECE 118

It is specifically designed to meet the fire protection requirements of ECE 118, Annexes 6, 7 and 8.

Sustainable product option

An RC version with up to 90% recycled material supports circular economy and resource conservation.

Good mechanical properties

Combines toughness, high rigidity, and strength for mechanically stable lightweight components.

Easy further processing

Reduced weight supports easier handling, with good thermoforming behavior comparable to solid ABS.
