

EtroX[®] I CM natural

PI

The premium product for highly demanding applications

Our premium material EtroX[®] I CM was specially developed to meet the high demands of the electronics, aerospace and automotive industries. As a pure polyimide, it withstands particularly high temperatures. EtroX[®] I CM can be used to design components that offer significant advantages over other thermoplastics.

Operating in the following industries

 Electronics

 Semiconductor Industry

 Aerospace

 Vehicle Construction

 Semiconductor Front-End applications

 Semiconductor Wet Bench

 Semiconductor Back-End applications

 Semiconductor High and low temperature

Extended characteristics

Advantages of a premium material

High tensile strength, with adequate impact strength, stiffness and dimensional stability make it a premium material for demanding applications.

High mechanical strength

Even at high operating temperatures of more than 250 °C, EtroX[®] I CM has a high mechanical strength, so that the material can replace metals.

High temperature resistance

The material's low inherent flammability is particularly important for applications with a high safety risk.

Easy processing

EtroX[®] I CM can be machined to tight tolerances using conventional CNC machines.

Long lifespan

Our material has a low wear rate so that components made of EtroX[®] I CM can be used for a long time and thus increase efficiency in the application.

Print: 03/05/2024 • PIM-Version: 70 • PIM-ID: 752313 • PIM-Code: 70-606

Application examples

Thrust washer for electric cars

Test socket for final chip testing

Gripper for glass bottles
