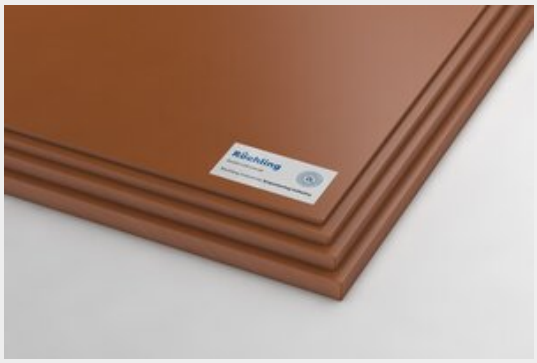
EtroX® I CM natural

PI

The premium product for highly demanding applications

The high-end material EtroX® I CM has been specially developed to meet the most demanding requirements of the semiconductor, aerospace and automotive industries. As a pure polyimide, it can withstand particularly high temperatures of up to 350 °C. EtroX® I CM can therefore be used to manufacture components that offer significant advantages over other thermoplastics. Even at high temperatures exceeding 300 °C, EtroX® I CM exhibits high mechanical strength, enabling the material to replace metals.



Operating in the following industries

- Electronics
- Semiconductor Industry
- Aerospace
- Vehicle Construction

Extended characteristics

Advantages of a premium material

High tensile strength, with adequate impact strength, stiffness and dimensional stability make it a premium material for demanding applications.

Long lifespan

Our material has a low wear rate so that components made of EtroX® I CM can be used for a long time and thus increase efficiency in the application.

High temperature resistance

The material's low inherent flammability is particularly important for applications with a high safety risk.

Easy processing

EtroX® I CM can be machined to tight tolerances using conventional CNC machines.

High mechanical strength

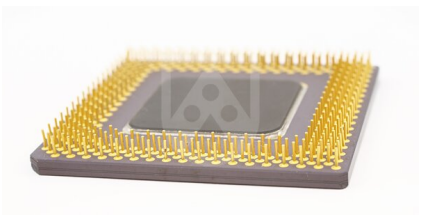
Even at high operating temperatures of more than 250 °C, EtroX® I CM has a high mechanical strength, so that the material can replace metals.

Röchling Industrial Lahnstein SE & Co. KG
Sustaplast-Str. 1 • 56112 Lahnstein/DE • Tel. +49 2621 693-0 • info.lahnstein@roechling.com

Print: 02/05/2026 • PIM-ID: 752313 • PIM-Code: 103-1366

Application examples

Thrust washer for electric cars



Test socket for final chip testing

Gripper for glass bottles
